TEST PLAN

1. Project Overview

Project Description

This test plan outlines the testing approach for the Shopee Online Shopping System mobile application. The system allows customers to browse products, manage their shopping cart, place orders, and complete purchases.

Document Information

Project Name:	Shopee Mobile App
Test Plan Version:	1.0
Prepared By:	Team Lead
Date:	December 2025

Key Focus Areas

- Functional Testing of core features
- UI/UX Testing for usability
- Basic Security Testing
- Bug Identification and Reporting

2. Test Objectives

Primary Objective

To verify that the selected modules of the Shopee Online Shopping System function correctly, meet functional requirements, and provide a satisfactory user experience.

Specific Objectives:

1. Functional Validation

Ensure all features work according to specifications and requirements

2. User Experience

Verify the application is intuitive, easy to navigate, and user-friendly

3. Data Integrity

Validate that user data, cart items, and orders are handled correctly

4. Security Compliance

Test authentication mechanisms and basic input validation

5. Defect Identification

Identify, document, and track bugs for resolution

3. Scope of Testing

3.1 In Scope

- ✓ User Registration & Login
- ✓ Product Search & Filtering
- ✓ Add to Cart Functionality
- ✓ Checkout & payment simulation
- ✓ Order history

3.2 Out of Scope

- ✗ Real Payment Gateway Integration
- ✗ API Load & Performance Testing
- ✗ Third-party Integrations

3.3 Testing Boundaries

Testing will focus on the mobile application interface and user-facing features. Backend API testing will be limited to functional validation through the UI only.

4. Test Strategy & Approach

4.1 Testing Types

Testing Types	Description
Functional Testing	Verify that all features behave correctly according to requirements
Usability Testing	Check ease of use, navigation flow, and overall user experience
Security Testing	Verify login authentication and basic input validation

4.2 Test Environment

Testing will be conducted exclusively on the Shopee mobile application. The test environment consists of mobile devices running either Android or iOS operating systems with the latest version of the Shopee mobile app installed. Test execution will be performed directly on physical or emulated mobile devices to ensure accurate representation of the user experience. Documentation and test reporting activities will be completed using desktop or laptop computers for convenience and efficiency.

4.3 Entry & Exit Criteria

Entry Criteria

- ✓ Test plan approved
- ✓ Test cases prepared
- ✓ Test environment ready
- ✓ Test data available

Exit Criteria

- ✓ All test cases executed
- ✓ 90%+ pass rate achieved
- ✓ Critical bugs resolved
- ✓ Test report completed

5. Roles

Role	Name	Responsibilities
Test Lead	Faith Anne Aguilera	Overall test planning, coordination, reporting, and team management
QA Engineers	- John Ivan Ello - Charity Joy Ladia - Jeanson Villanueva	Test case creation, execution, bug reporting, and test data preparation

6. Test Deliverables

The following sections detail milestones crucial to the completion of the testing phase of the project. These deliverables provide formal evidence that testing was completed, defects were recorded, and recommendations were made prior to system implementation.

6.1 Test Activities

All major activities to perform during the testing phase are described below. These activities reflect the workflow used by the QA team when evaluating the Shopee mobile application.

1. **Identify Test Team** – The Test Team members were identified and assigned specific responsibilities for reviewing the Shopee mobile application.
2. **Test Plan** – A Test Plan was created to define the testing scope, objectives, testing methodology, and roles for the project.
3. **Test Plan Team Review** – The Test Plan was reviewed to ensure that test scope, roles, and test cases were aligned with the project's needs.
4. **Test Scenarios and Test Cases** – High-level test scenarios and detailed test cases were prepared, which includes test objectives, steps, expected output, actual output, and pass/fail status.
5. **Test Data Acquisition** – Necessary test data were prepared for test case execution.
6. **Mobile Device and Environment Validation** – This involved verifying that each tester's mobile device (Android/iOS) was functioning properly, had the latest version of the Shopee app installed, and the test environment was set up correctly.

7. **Test Case Execution** – All the prepared test cases were executed on the Shopee mobile application. Testers documented results and noted departures from expected outcomes.
8. **Defect Tracking** – Issues found during testing were logged with detailed reproduction steps, severity, and priority. Bug reports were monitored by the test lead.
9. **Test Touch Point** – Communication with team members was conducted to review findings, discuss critical bugs, and plan next steps.
10. **Test Summary Report and Presentation** – A comprehensive test summary report and PowerPoint presentation were prepared to showcase testing activities, results, and key findings.

6.2 Test Schedule

Activity	Estimated Completion Date	Role
Identify Test Team	November 28, 2024	Test Lead, Testers
Test Plan	December 1, 2024	Test Lead
Test Plan Team Review	December 1, 2024	Test Lead, Testers
Test Scenarios and Test Cases	December 1, 2024	Testers
Test Data Acquisition	December 2, 2024	Test Lead, Testers
Mobile Device and Environment Validation	December 2, 2024	Testers
Test Case Execution	December 3, 2024	Testers
Defect Tracking / Bug Reports	December 3, 2024	Testers
Test Touch Point	December 4, 2024	Testers
Test Summary Report and Presentation (PPT)	December 5, 2024	Test Lead
Final Presentation	December 6, 2024	Test Lead, Testers

6.3 Risks & Mitigation

- **Risk:** Delayed bug fixes → **Mitigation:** Early identification and prioritization of critical defects
- **Risk:** Incomplete test coverage → **Mitigation:** Focus on critical user flows and high-priority features
- **Risk:** Time constraints → **Mitigation:** Clear timeline, task delegation, and parallel work execution
- **Risk:** Device compatibility issues → **Mitigation:** Test on multiple devices (Android and iOS) early in the process

TEST SCENARIO

User Registration & Login

1. Verify user registration with valid details and OTP verification.
2. Verify error handling for missing or invalid registration details.
3. Verify login using valid and invalid credentials.
4. Verify login failure for banned or deactivated accounts.
5. Verify password reset with registered email or phone number.
6. Verify logout functionality and session expiration after inactivity.
7. Verify updating user profile details including saved addresses.
8. Verify account lockout after multiple failed login attempts.
9. Verify login using third-party options such as Google or Facebook.
10. Verify app prompts user to update incomplete profile information after registration.
11. Verify that enabling or disabling biometric login (fingerprint/Face ID) works properly.
12. Verify session remains active across app restarts until the user manually logs out.

Product Search & Filtering

13. Verify searching products using keywords returns relevant results.
14. Verify image-based search detects accurate product results.
15. Verify applying filters (price range, brand, rating, shipping) updates results correctly.
16. Verify removing and resetting filters restores default listing.
17. Verify sorting products by relevance, price and newest.
18. Verify search history saving, viewing and clearing functionality.
19. Verify no-results message displays when search returns zero matches.
20. Verify searching within a specific shop shows only that shop's items.
21. Verify recently viewed products appear correctly in the "Recently Viewed" section.

- 22. Verify category-based navigation displays correct products per category.
- 23. Verify location-based filters show only items deliverable to the selected address.
- 24. Verify sponsored products appear correctly in search results.

Add to Cart

- 25. Verify adding single and multiple items to cart.
- 26. Verify increasing and decreasing item quantity including stock limit validation.
- 27. Verify removing items from cart updates cart total.
- 28. Verify shipping fee, taxes and discounts update dynamically.
- 29. Verify cart retains items after logout, relogin or app update.
- 30. Verify applying vouchers successfully updates order summary.
- 31. Verify error message when attempting to purchase items unavailable for the user's location.
- 32. Verify adding variations (size/color) updates item details correctly in the cart.
- 33. Verify adding out-of-stock variations displays the correct unavailability message.
- 34. Verify "Buy Now" bypasses cart and moves directly to checkout.
- 35. Verify "Add to Cart" from product recommendations (e.g., "You May Also Like") successfully adds the item to the cart.
- 36. Verify cross-shop items in the cart show separate shipping fee calculations.

Checkout & Payment Simulation

- 37. Verify selecting and managing delivery addresses during checkout.
- 38. Verify selecting different payment methods (COD, card, digital wallet).
- 39. Verify accurate final order summary including pricing and shipping.
- 40. Verify successful order placement shows confirmation status.
- 41. Verify handling of payment failures with retry option.
- 42. Verify refund progression for canceled or failed payments.
- 43. Verify entering an invalid voucher code during checkout displays the correct error message.
- 44. Verify the shipping fee automatically recalculates when the delivery address is changed during checkout.
- 45. Verify the selected payment method is saved and shown as default on the next checkout attempt.
- 46. Verify the checkout process prevents placing an order when mandatory fields (address, payment, phone number) are not completed.
- 47. Verify VAT and tax calculations update correctly when the order total changes during checkout.

Order History

- 48. Verify listing orders categorized by status (To Pay, To Ship, Completed etc).

49. Verify real-time tracking timeline updates per delivery stage.
50. Verify cancellation of order before shipment reflects correctly.
51. Verify confirmation of order receipt enables rating and review.
52. Verify reorder functionality for previously purchased items.
53. Verify return/refund request submission for eligible products.
54. Verify refund progress tracking and correct refund amount issuance.
55. Verify filtering order history by date or status displays correct results.
56. Verify invoice download or view option appears for eligible completed orders.
57. Verify dispute or chat-with-seller option is accessible from order details.
58. Verify updating delivery instructions or notes from ongoing orders works correctly.
59. Verify system notifications appear for major order status updates (shipped, out for delivery, delivered)

TEST CASES & DATA

TEST CASES & DATA

BUG REPORTS

1. **TEST CASE NAME:** TC_URL_004_Verify_Banned_Deactivated_Account
Bug ID: BUG_001
Title: Banned or deactivated user can still access HomeTab after login attempt
Severity: High
Priority: High
Environment: Shopee Mobile App (Android 14)
Steps to Reproduce:
 1. Open the Shopee mobile application
 2. Enter login credentials of a banned/deactivated account (Email: optifi10@gmail.com)
 3. Attempt to log in**Expected Result:**
Login should be blocked with notification indicating the account is banned or deactivated.
Actual Result:
User is directed to HomeTab instead of receiving a login restriction notification.
Status: Open
2. **TEST CASE NAME:** TC_PSF_007_Verify_No_Results
Bug ID: BUG_002
Title: No "No Results Found" message displayed when search returns zero results
Severity: Medium
Priority: Medium
Environment: Shopee Mobile App, (Android 14)

Steps to Reproduce:

1. Open the Shopee mobile application
2. Click on the Search Bar
3. Enter a random string with no matching products (e.g., "essscehetnefnfdbqb e week 4_;;(&(@%@^ &")
4. Execute the search

Expected Result:

No results found message should be displayed when the search returns zero results.

Actual Result:

No "No Results Found" message is displayed.

Status: Open

3. **TEST CASE NAME:** TC_ATC_007_Verify_Restricted_Location

Bug ID: BUG_003

Title: Incorrect error message displayed when item is unavailable in restricted location

Severity: High

Priority: High

Environment: Shopee Mobile App, (Android 14)

Steps to Reproduce:

1. Open the Shopee mobile application
2. Add/Modify Saved Address
3. Set delivery location to a restricted area (Location: Busuanga, Palawan)
4. Attempt to purchase an item unavailable in that location

Expected Result:

A notification appears stating that the item is not available in the selected area.

Actual Result:

Error shows (F00): Oops, something went wrong. We are looking into it.

Status: Open

4. **TEST CASE NAME:** TC_CPS_008_Verify_Shipping_Recalculation

Bug ID: BUG_004

Title: Shipping fee and discount subtotal not recalculating when delivery address is changed **Severity:** High

Priority: High

Environment: Shopee Mobile App (Android 14)

Steps to Reproduce:

1. Open the Shopee mobile application
2. Add item to cart (Item: 6Pcs Paint Brush & Palette Set - For Watercolor, Oil, Acrylic, Gouache)
3. Go to checkout with saved address (Name: Jeanson Villanueva, Location: Metro Manila, Metro Manila, Sta. Cruz, Barangay 334)
4. Change delivery address to different location (Name: Erica Villanueva, Location: South Luzon, Cavite, Cavite City, Barangay 41 (Rosal))

Expected Result:

Shipping fee and ETA update when delivery address is changed.

Actual Result:

Shipping Subtotal and Shipping Discount Subtotal don't change when delivery address is modified.

Status: Open

TEST SUMMARY REPORT

Total Test Cases: 55

Executed: 55

Passed: 51

Failed: 4

Overall Result: *Partially Successful – Fixes Required*
